Safe Harbor Statement

The following is intended to outline our general product direction. It is intended for information purposes only, and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, and timing of any features or functionality described for Oracle's products remains at the sole discretion of Oracle.

Agenda

- Health Sciences Strategy – Joel Haspel – 20 Minutes
- Healthcare Analytics – Joel Haspel – 30 Minutes
- BI at the Business Services Authority – Jeremy Nettle – 10 Minutes
- Health Information Exchange – Joel Haspel – 20 Minutes

Agenda

Life Sciences

- Accelerate clinical development
- Support entire drug safety lifecycle
- Enable clinical data aggregation

Healthcare

- Power enterprise healthcare analytics
- Enable provider/payer integration
- Drive personalized medicine

Convergence

- Intersection of clinical trials and clinical care
- Develop collaboration networks for providers and life sciences companies

Life Sciences

Optimizing Clinical Research & Development

MEDICATION ADHERENCE (PROTEUS)

MEDICATION ADHERENCE

- FDA-approved ingestible sensors
- Captures the body's physiologic responses and behaviors
- Sends digital health information to a mobile app
- Oracle's clinical trial applications customers have exclusive access to real-time data on therapeutic use

MEDICATION ADHERENCE

- Medication compliance insight
- Better dose selection
- Fewer Phase III failures
- Improved drug safety

Oracle Life Sciences

Broadest, best-of-breed applications

Focus on Integration

The highest standards of scalability, security, and privacy

Healthcare

Healthcare Providers are Facing:

Changing business models and risk shifting

Margin pressure – cost, revenue, and volume

Consolidation pressure

Aging population and management of chronic diseases

Increased complexity in regulation

Immediate Focus:

- Operational effectiveness
- Risk-based revenue

Evolves Over Time:

- Patient engagement and compliance
- Care coordination
- Population health
- Precision medicine

Oracle Healthcare Portfolio

Enterprise Healthcare Analytics

- Clinical Performance
- Population Health
- Financial Performance
- Safety & Comparative Effectiveness

Translational Medicine

- Biomarker Discovery
- Patient Cohort ID & Selection
- Statistical & Scientific Analysis
- Molecular Basis of Disease

Health Sciences Network

- Collaborative R&D
- Clinical Trial Patient Recruitment

Health Information Exchange

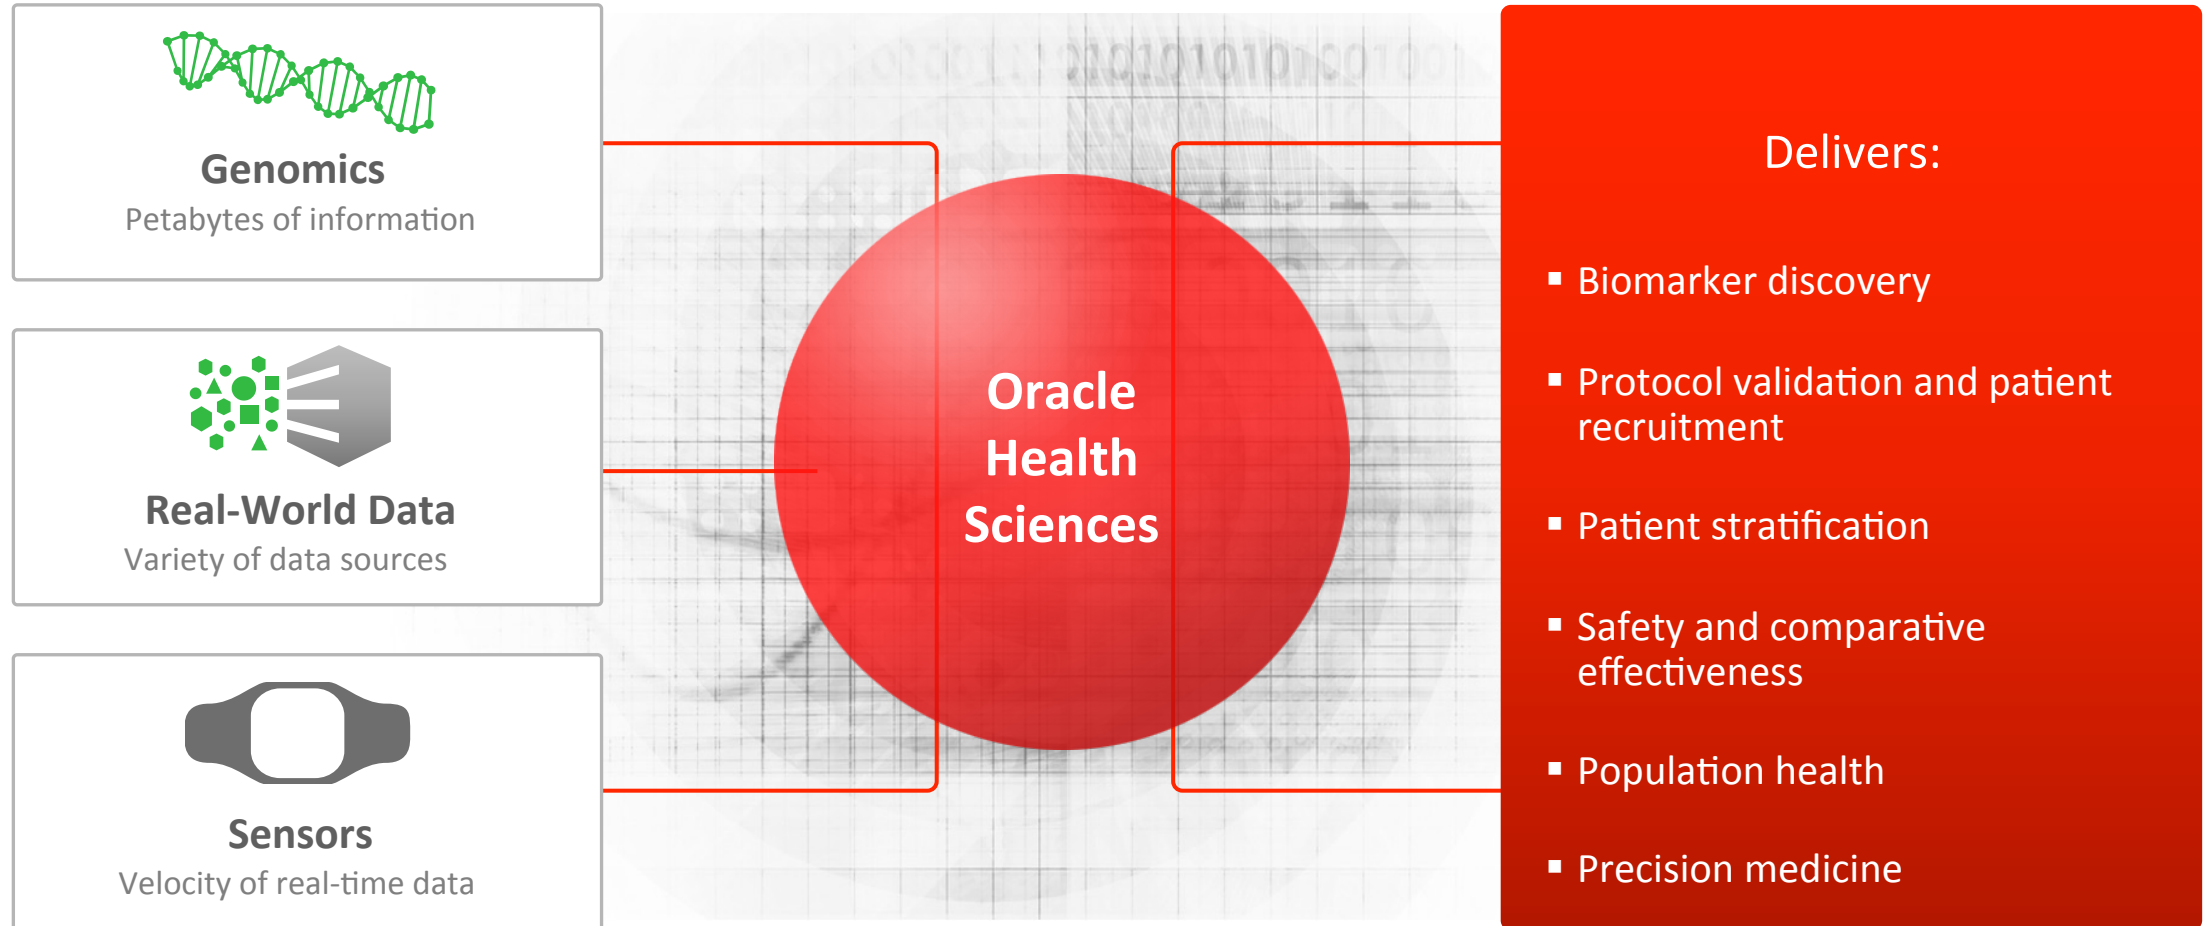

- Patient-Centered Care Coordination
- Patient and Provider Identification

Convergence

Harnessing Big Data for Life Sciences & Healthcare

Effectiveness of Most Drugs

Major Drug	Drug Effectiveness	Cost of Ineffectiveness to Healthcare System
Hypertension Drugs ACE Inhibitors	10-30% 	\$390 million – \$1.2 billion
Heart Failure Drugs Beta Blockers	15-25% 	\$345 million – \$575 million
Anti Depressant Drugs SSRIs	20-50% 	\$2.3 billion – \$5.8 billion
Cholesterol Drugs Statins	30-70% 	\$3.8 billion – \$8.8 billion
Asthma Drugs Beta-2-agonists	40-70% 	\$560 million – \$1.0 billion

Oracle Healthcare Analytics Data Integration (OHADI)

Consolidation

Integration

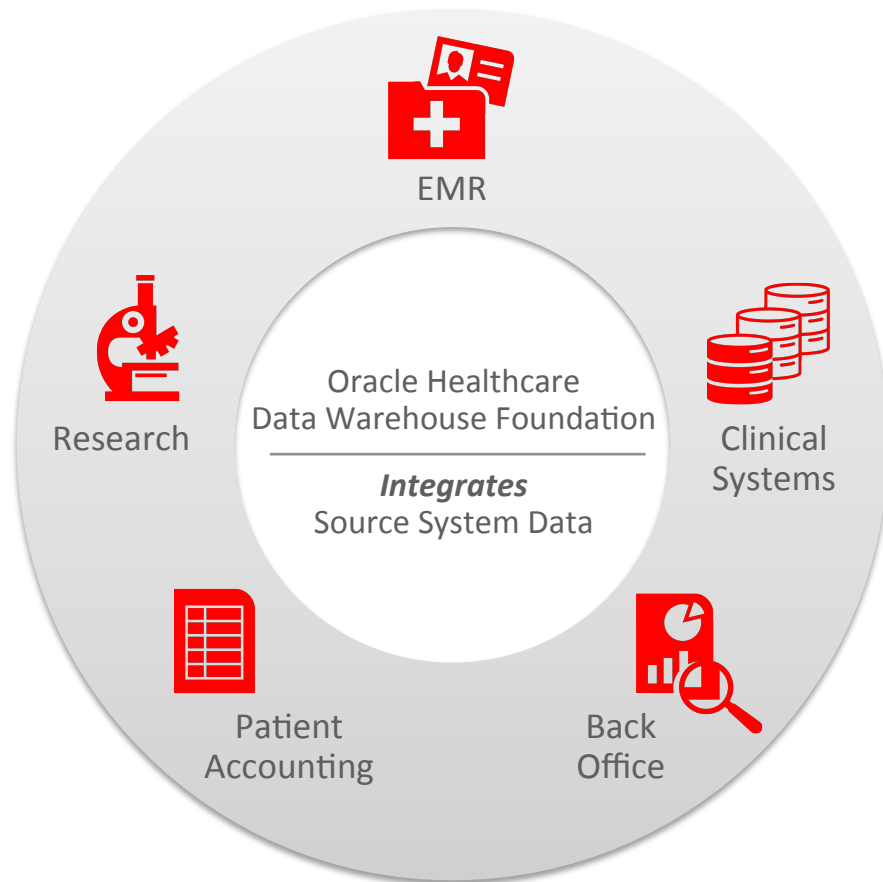

Validation

- Loads disparate source data into Oracle's Healthcare Data Warehouse Foundation
- Enables better decisions with comprehensive, cross system insights
- Supports data security preventing the proliferation of errors
- Significantly lowers the cost and risk of data integration and management

Healthcare Data Warehouse Foundation

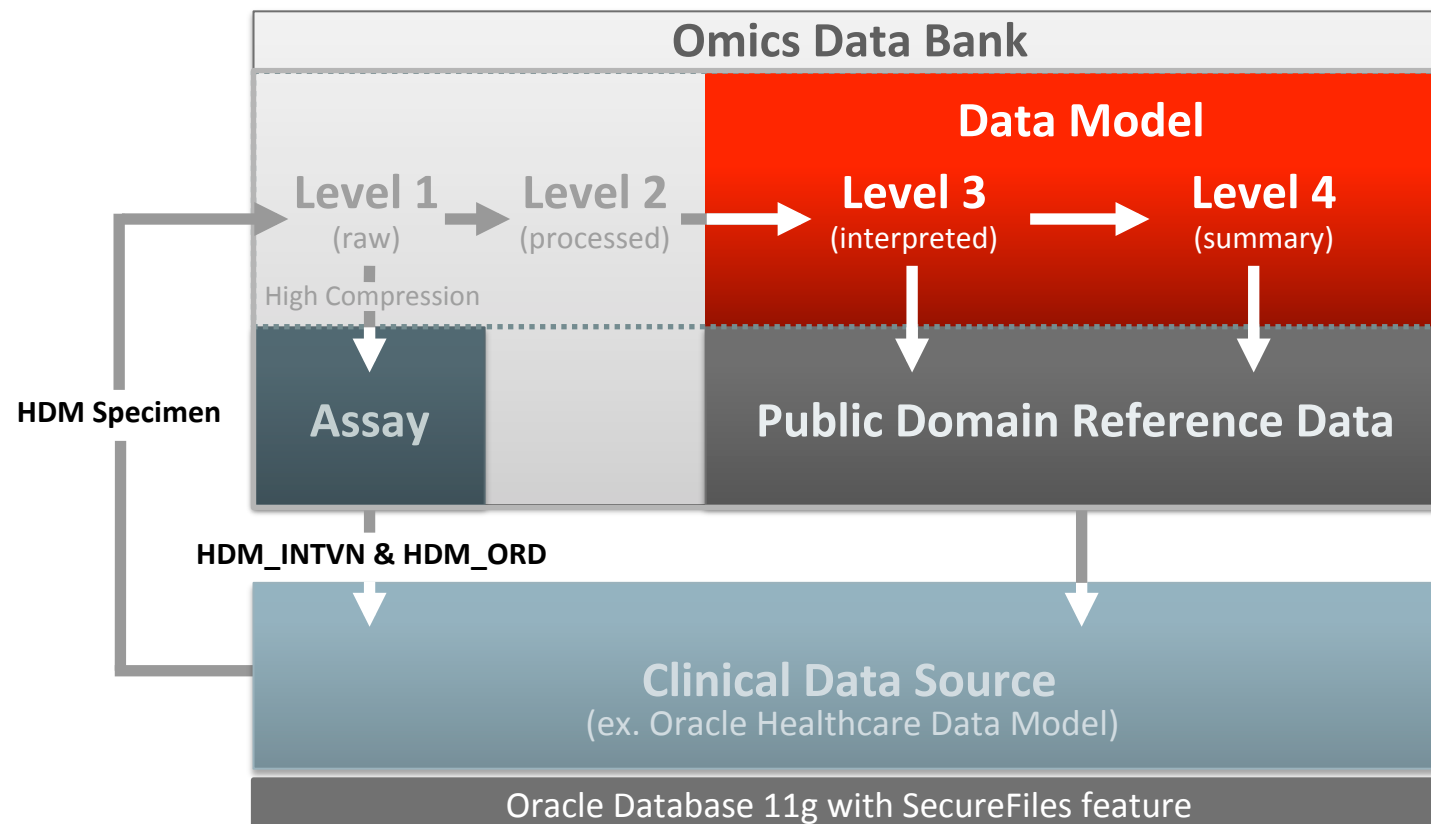

Supports Prebuilt and Custom BI and Performance Management Applications

- Easily extensible in any application environment
- Creates holistic enterprise view of information
- Includes more than 1,200 entities and 11,000 attributes
- Supports “meaningful use” phase 1 quality content

Omics Data Bank

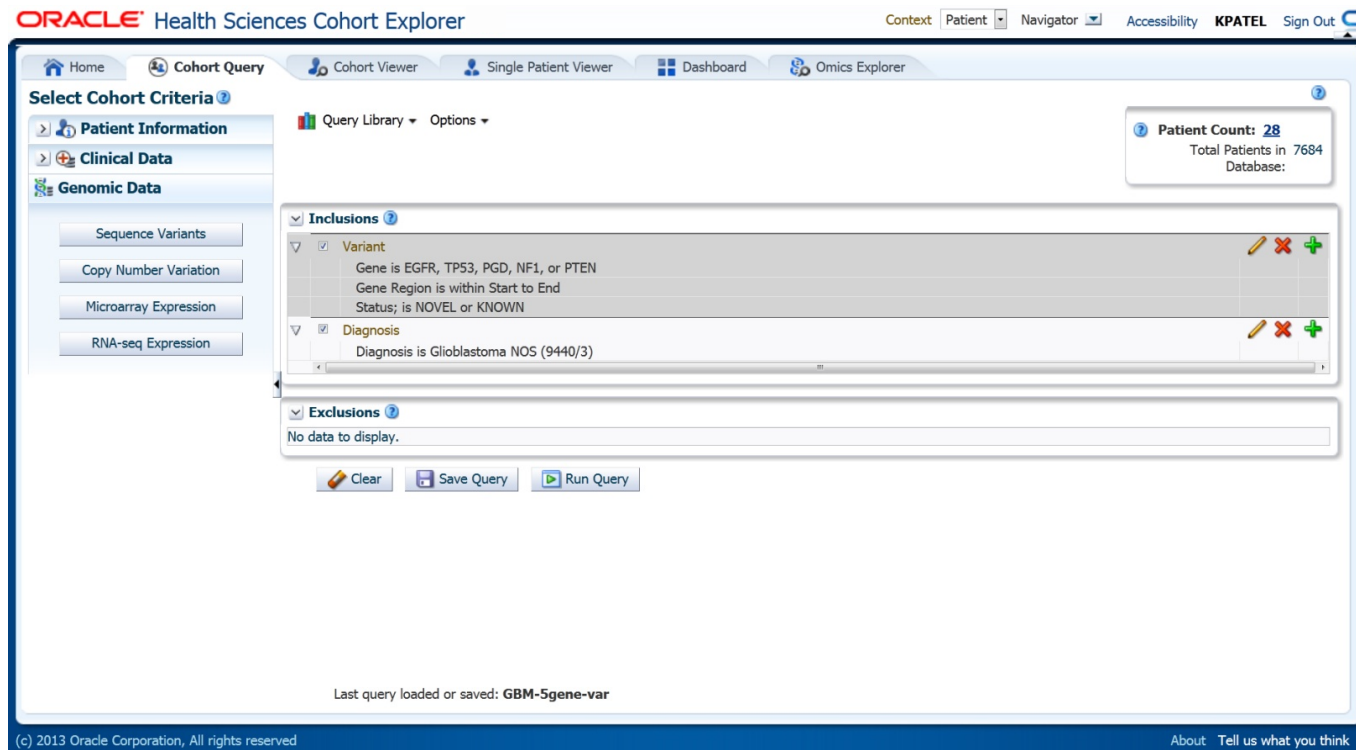

Unprecedented Power and Agility in the Pursuit of Biomarkers

- Enables turnkey integration and analysis of multiple types of molecular data
- Supports cross-platform and cross-modality
- Optimized for real-time querying
- Compatible with clinical data sources of your choice

Cohort Explorer

Web-Based Interface to Identify and Explore Patient Subpopulations

- Enables cross pheno-genotype patient stratification
- Offers seamless, integrated views of clinical and OMICS data
- Provides individual patient-level longitudinal views
- Delivers real-time metrics on patient populations with dashboards
- Features state-of-the-art genomic visualizers

Improving Population Health and Patient Outcomes

Combining Clinical and OMICS data

- Targeted treatments
- More effective trials
- Faster time to market
- Improved safety
- Dramatically lower costs

Leverage Clinical and Genomics Data in One System

Find patients that are poor responders for drug Y and have a mutation in the promoter region of Gene X

Identify the expression level of TP53 mutants by cancer tissue

Quantify the number of disease Z patients responding to treatment with a chromosome 18 deletion and blood samples in the biobank

Measurable Impact on Healthcare

34%

reduction in chemotherapy use

would occur if women with breast cancer receive a genetic test of their tumor prior to treatment

17,000

strokes could be prevented each year

if a genetic test is used to properly dose the blood thinner warfarin

\$604M

in annual health savings

would be realized if patients with metastatic colorectal cancer receive a genetic test for the KRAS gene prior to treatment

Case Studies

MD Anderson

CASE STUDY

Background / Needs

- Moon Shots initiative to **cure 6 cancers in 5 years**
- **Single platform** for clinical and genomic data aggregation and analysis
- **Scalability** to address annual data growth
- **One source of truth** for all data

Results With Oracle

Fast implementation
– in use within 6 months

Supporting more than 1 million patients spanning a 70-year period

Reduced complex queries time from weeks to minutes

Background / Needs

- **Aggregate data** from 200+ sources
- Information management strategy to **integrate clinical and OMICS data**
- Provide **better clinical insights** for:
 - Treatment effectiveness
 - Cost variations
 - Disease prevention
- **Simplify data delivery** for analysis

Results With Oracle

Rapid integration of clinical and genomic information

Preliminary **identification of genes and pathways** unique to pre- and post-menopausal breast cancer patients

Consolidation of multiple data marts

Background / Needs

- Support **Center for Individualized Medicine**
- A **single infrastructure** to support activities spanning research and clinical practice
- Appropriate **privacy and security controls**

Results With Oracle

Managing:

- Low throughput **gene-centric panels**
- High throughput **whole exome & whole genome sequences**

Cancer Research UK

CASE STUDY

Background / Needs

- **National collaboration** with UK government and AstraZeneca and Pfizer
- Build a **national database** of anonymized of tumor genetic information, treatments and outcomes
- **Genetic testing** of tumors linked to clinical data

Results With Oracle

Tested 2,000 tumors across 24 clinical sites

Two new clinical trials in development

Oracle Enterprise Healthcare Analytics Delivers

The most comprehensive data model and platform in healthcare

ORACLE®

Understanding Potential Fraud and Error

Jeremy Nettle, Global Client Advisor, NHS and GSK

Industry Day 2014

Thursday, 16th October 2014

Business Services Authority

Supporting the NHS, supplying the NHS, protecting the NHS

ORACLE®

What is the cost of Fraud in the NHS today

"Fraud is costing the NHS £5bn a year, with a further £2bn lost to financial errors, the former head of its anti-fraud section says.

Jim Gee, report co-author, explains how the figures in his report were calculated

The amount lost to fraud alone could pay for nearly 250,000 new nurses, a report seen by Panorama suggests.

The NHS must "get on with tackling the problem", said Jim Gee, co-author of the Portsmouth University study and ex-director of NHS Counter Fraud Services."

<http://www.bbc.co.uk/news/health-26654001>

Types of Fraud in the NHS

Deaf couple and their children 'scammed £800,000 in benefits by submitting fake invoices for sign language interpreters'

Shahab Reza has admitted scamming the state out of thousands
His wife, Shehnaz, and their children Zainab and Abbas deny part in plot

Court hears invoices were submitted for sign language translators
But, prosecutors claim, the family used the money for luxury lifestyle

Sept 14 2014

Read more:

<http://www.dailymail.co.uk/news/article-2751720/Deaf-couple-family-scammed-800-000-benefits-submitting-fake-invoices-sign-language-interpreters.html#ixzz3DIKiZA5N>

Temporary hospital executives were paid £1,000 per day

Gazette News, 4 days ago

Senior executives at Colchester's hospital trust were paid more than £1,000 per day, it has been revealed.

A dentist who defrauded the NHS out of £1.4m has been told to pay back the money.

Dr Joyce Trail, of Park Drive, Little Aston, Sutton Coldfield, was jailed for seven years, in October 2012.

A compensation order of £1,376,423.83 has now been issued at Warwick Crown Court, meaning any assets up to this amount can be claimed by the NHS.

NHS Business Services Authority

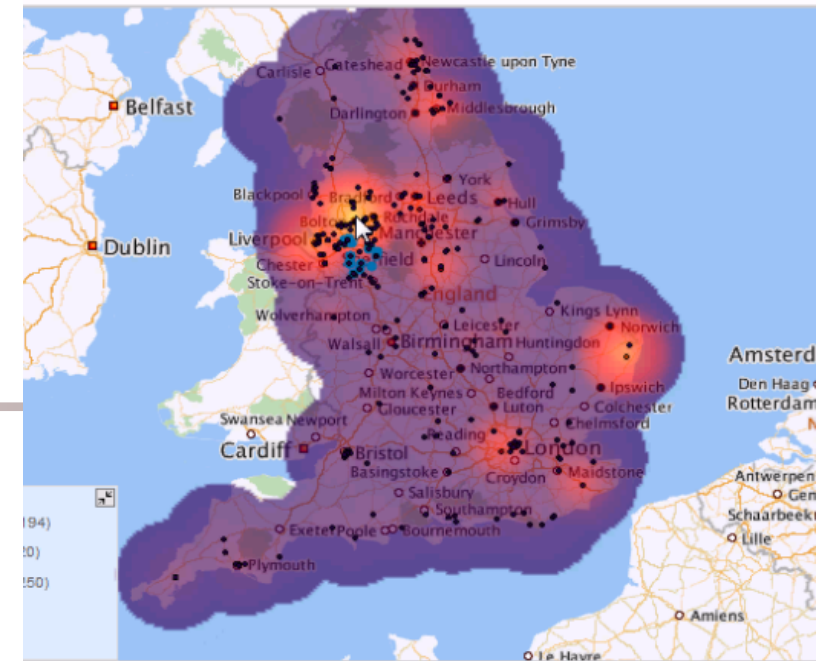

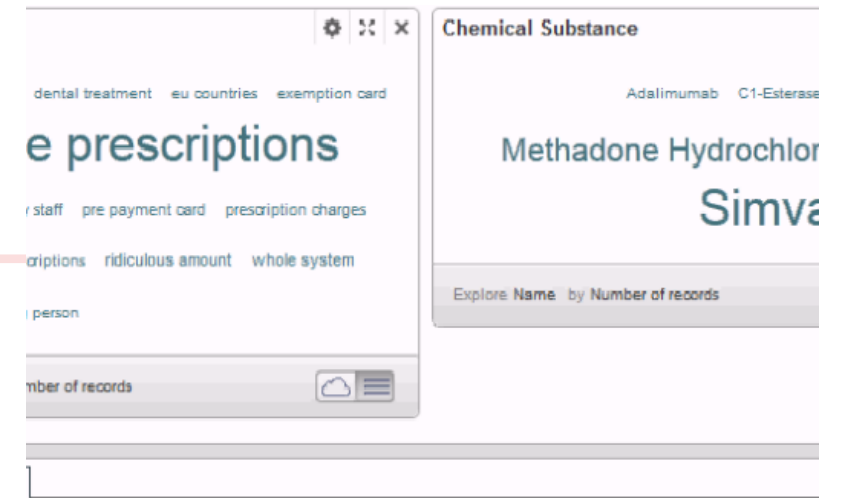

The NHS Business Services Authority is a Special Health Authority and an Arms Length Body of the Department of Health which provides a range of critical central services to NHS organisations, NHS contractors, patients and the public.

Service portfolio includes:

- ❖ Management of the NHS Pension Scheme in England and Wales which has over 2.6 million members and receives contributions of over £9 billion per annum.
- ❖ Administration of the European Health Insurance Card (EHIC) scheme (in the UK) processing over 6.6 million EHIC cards this year. 23.5million people in the UK have an active EHIC card.
- ❖ Management of a 10-year outsourced Master Services Agreement (MSA) for the delivery of supply chain services to the NHS, supporting the planned delivery of around £1 billion of savings to the NHS over the life of the Agreement.
- ❖ Provision of strategic procurement and contract management expertise on Department of Health (DH) supply chain strategic contracts and programmes across the health sector.
- ❖ Prescriptions dispensed in primary care settings which involves processing approximately 1 billion prescription items and payments
Payments to pharmacists (in England) for prescribing totaling over £9 billion each year.
- ❖ Payments to dentists for work undertaken on NHS contracts which involves processing approximately 44 million dental forms and payments totaling over £2.5 billion in England and Wales.

Agenda

- Architecture
- Business value
- Reusability
- Portability

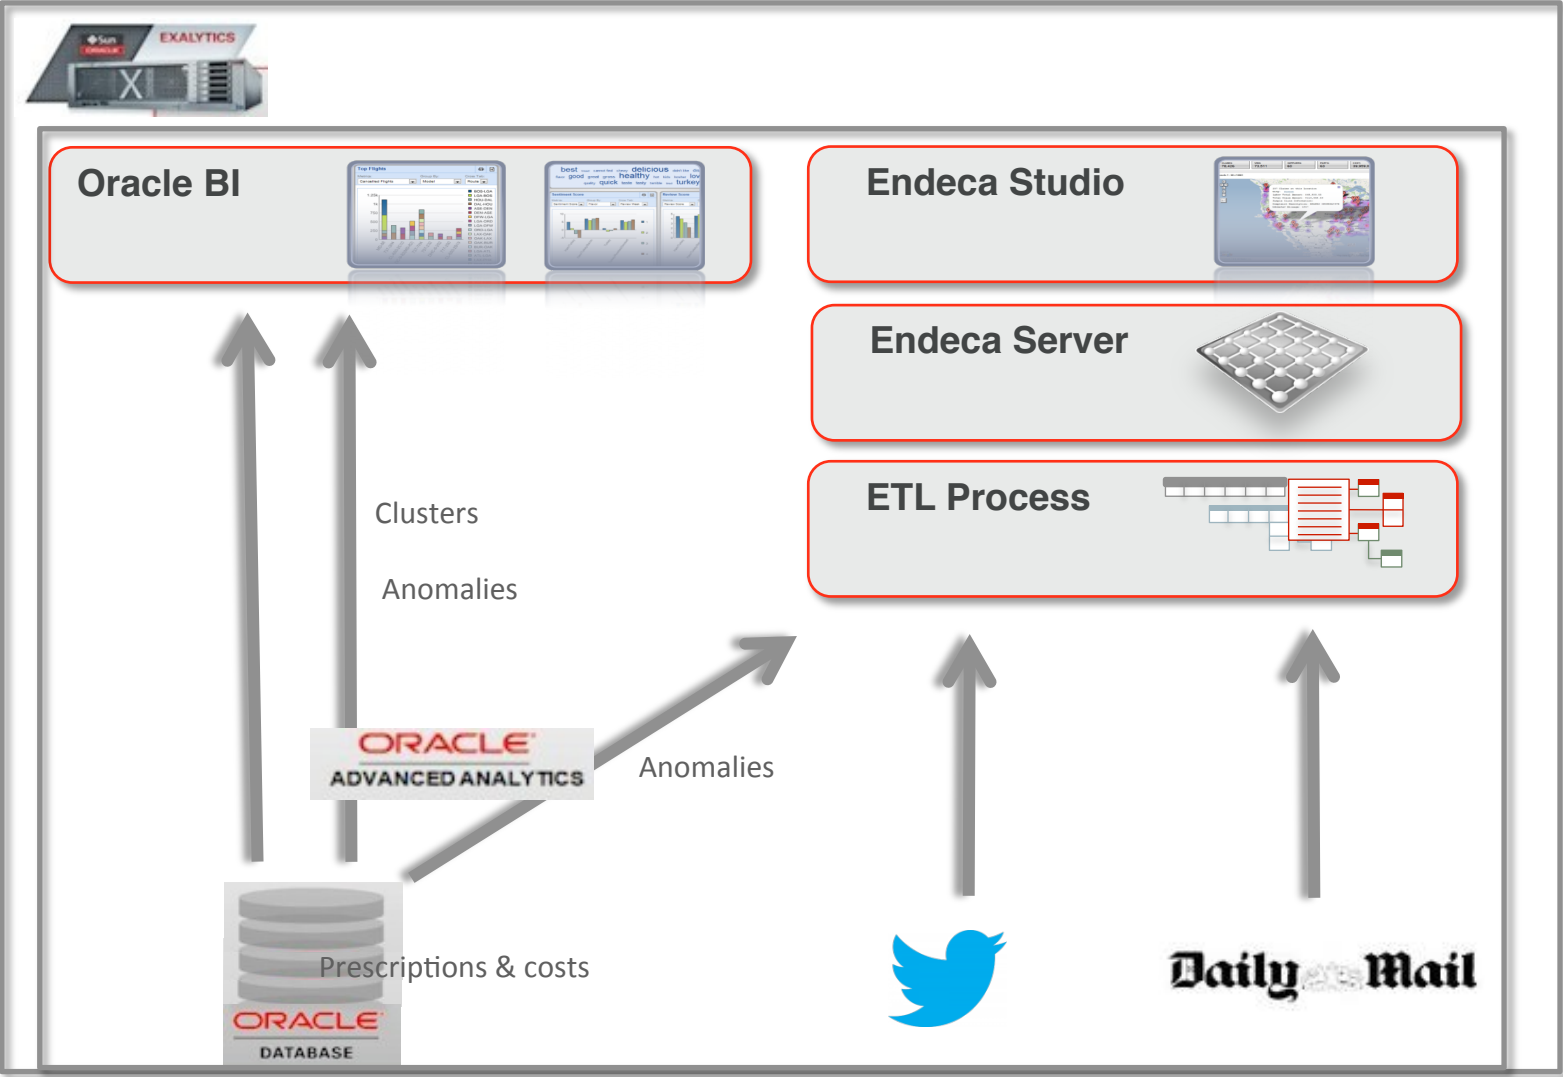

Fraud Detection

- Sift through data to find hidden patterns, discover new insights, and make predictions
- Techniques:
 - Predict a behavior (*Classification*)
 - Predict or estimate an event/value (*Regression*)
 - Segment a population (*Clustering*)
 - Identify factors more associated with fraud (*Attribute Importance*)
 - Find profiles of targeted people or items (*Decision Trees*)
 - Determine important relationships for fraud (*Associations*)
 - Find fraudulent or “rare events” (*Anomaly Detection*)

Ask questions - Information Discovery

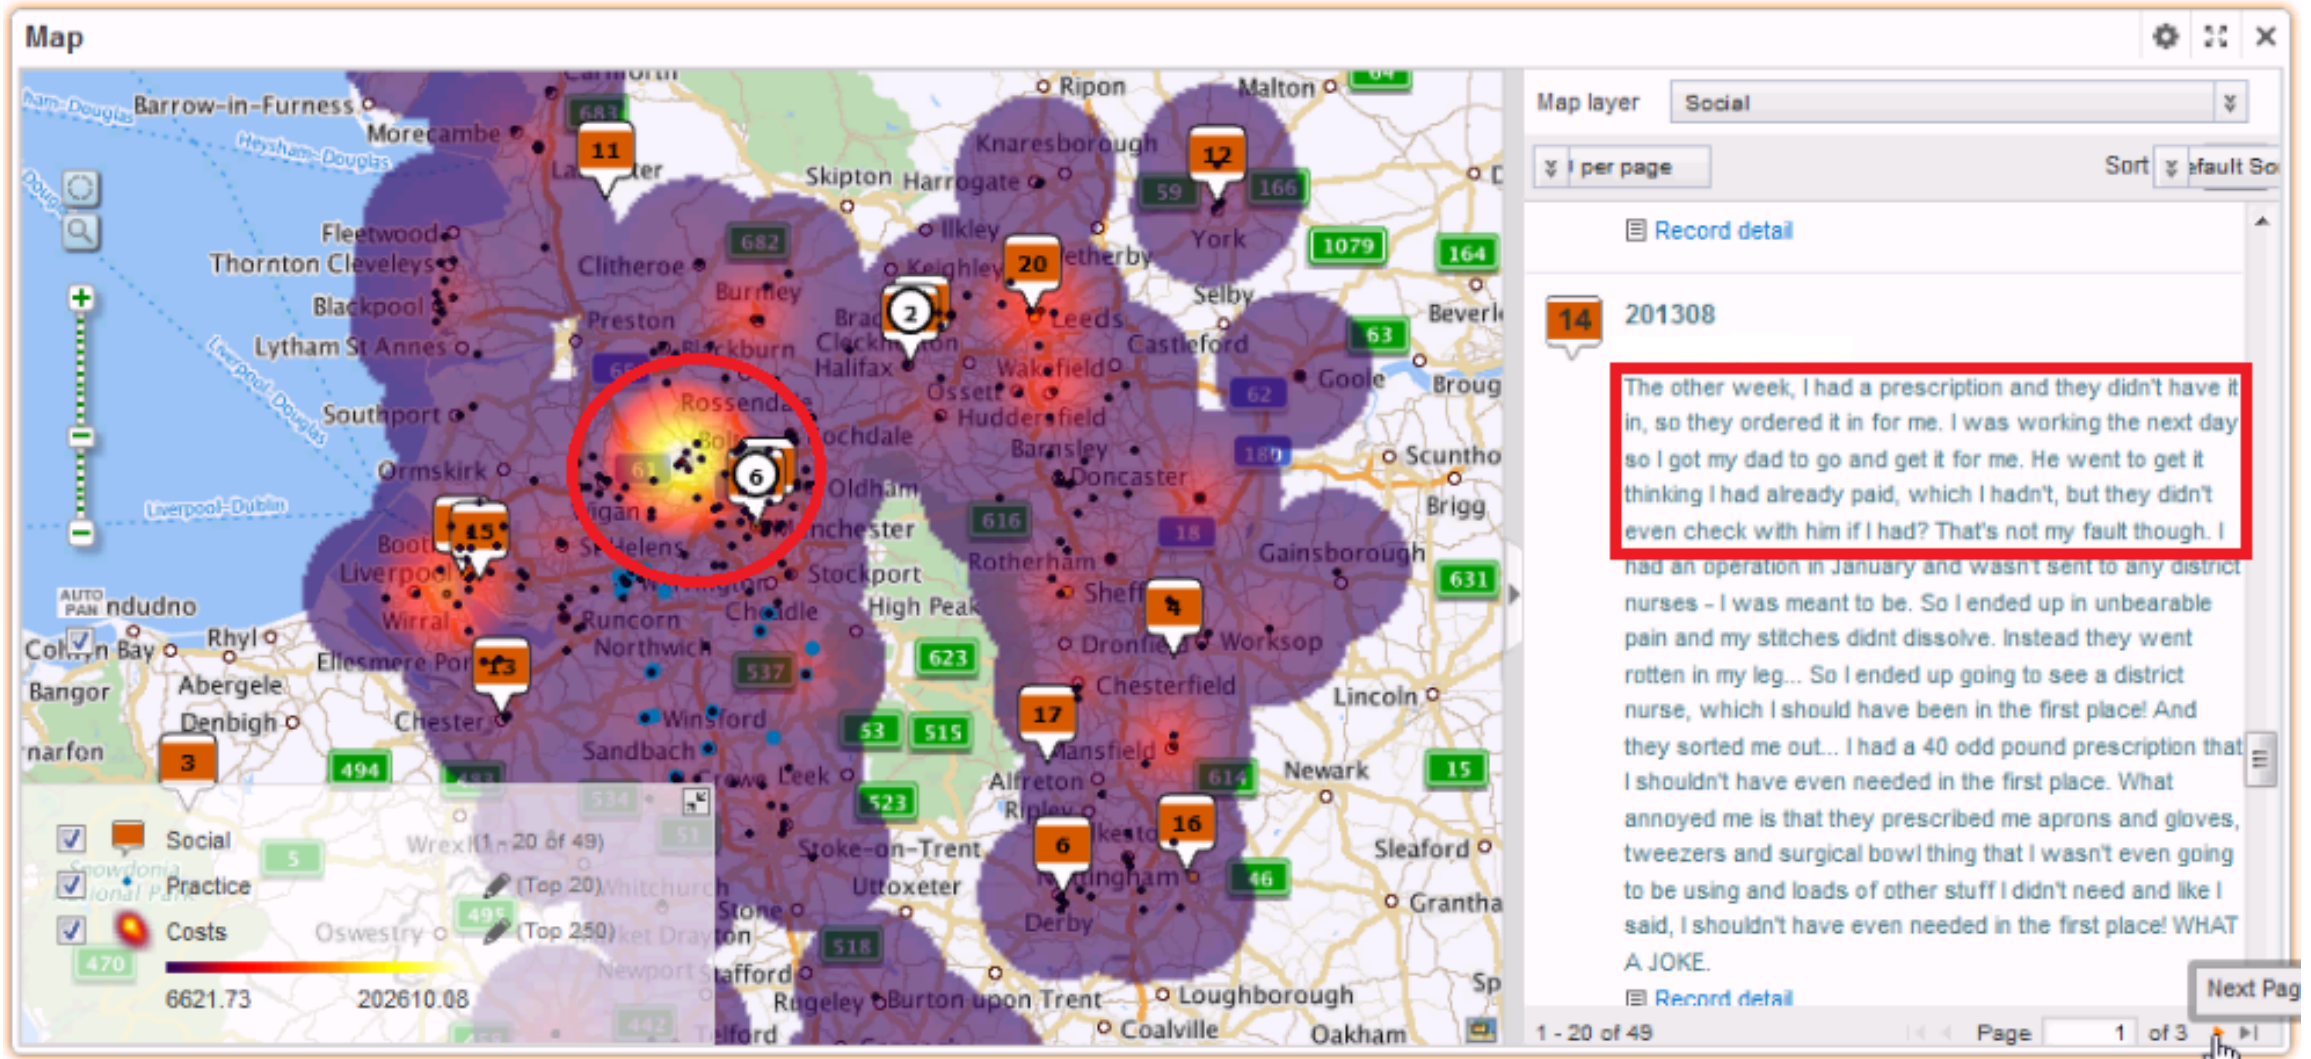

The screenshot displays the Oracle Endeca Information Discovery web application interface. The browser window shows multiple tabs, with the active one being 'Fraud Detection | N...'. The URL bar indicates the address '138.3.16.117:8001/eid/web/nhs'. The application header includes the Oracle logo and the text 'Endeca Information Discovery | NHS'. A navigation bar at the top shows 'Fraud Detection' and 'Disease Prevalence' tabs, along with an 'Add Component' button. The main interface is divided into several sections:

- Search Box:** A search input field with a magnifying glass icon and a 'Search within' checkbox.
- Summarization Bar:** A horizontal bar displaying key metrics: '80,002 Record Count', '9,189 Practice', '63,738 Prescriptions', '£22,834,508.11 Actual Cost (sum)', '-0.01 Avg Sentiment', and '224 Posts'.
- Selected Refinements:** A section indicating 'No refinements have been selected.'
- Available Refinements:** A sidebar on the left with a 'Source' filter. Under 'Source', 'Prescriptions' is selected, showing a list of refinements: 'Prescriptions (63738)', 'Practice Prevalence (8020)', 'Practice Prevalence AGE ... (8020)', and 'DailyMail (224)'. A 'Select All' button is at the bottom.
- Themes Discovered:** A section titled 'Daily Mail Themes Discovered' showing various themes like 'basic medication', 'carrier bag', 'checking system', 'dental treatment', 'eu countries', 'exemption card', 'free medication', 'free meds', 'local chemist', 'medical condition', 'pharmacy staff', 'pre payment card', 'prescription charges', 'prescription fee', 'recent change', 'repeat prescriptions', 'ridiculous amount', 'whole system', and 'working person'. It includes an 'Explore' button and a 'by Number of records' dropdown.
- Chemical Substance:** A section displaying 'Methadone Hydrochloride', 'Omeprazole', and 'Simvastatin' as chemical substances. It includes an 'Explore Name' button and a 'by Number of records' dropdown.
- Tabbed Component Container:** A section with two tabs: 'Monthly Actual Cost' and 'Geolocation'.
- BNF Code (records with values), Actual Cost (sum) by Period:** A section at the bottom showing a table with columns for 'BNF Code' and 'Actual Cost (sum) by Period'.

The bottom of the interface shows a status bar with '1 Data Set (loaded 12/5/2013)' and a 'Bookmark' button.

Prescription fraud costs thousands

8:14am Saturday 27th October 2012 in [News](#)

HUNDREDS of people have fraudulently claimed for free prescriptions in Bolton, costing the NHS thousands of pounds.

Now an anti-fraud specialist is working with pharmacies across the town to crack down on fraudulent claims and recover the money.

So far, prescriptions in 16 pharmacies in Bolton have been checked, with £1,602 being recovered.

In 2011, £771 was recovered and so far this year £831 has been collected.

Scans of prescriptions are sent to the Department for [work](#) and Pensions who look for certificates for medical exemption, NHS Tax Credit exemption, prescription pre-payments, maternity exemption and the NHS low income scheme.

Health Information Exchange

- Patient-Centered Care Coordination
- Patient and Provider Identification

Health Information Exchange

It is....

- **Electronic Health Record (EHR)** - An electronic record of health-related information on an individual that conforms to nationally recognized interoperability standards and that can be created, managed, and consulted by authorized clinicians and staff across more than one health care organization
- **Personal Health Record (PHR)** - An electronic record of health-related information on an individual that conforms to nationally recognized interoperability standards and that can be drawn from multiple sources while being managed, shared, and controlled by the individual

It is not...

- **Electronic Medical Record (EMR)** - An electronic record of health-related information on an individual that can be created, gathered, managed, and consulted by authorized clinicians and staff within one health care organization.
- **Hospital information system (HIS)** is an integrated information system designed to manage all the aspects of a hospital operation, such as medical, administrative, financial, legal and the corresponding service processing

Cancer Care-Coordination Scenario

Cancer Care-Coordination Scenario

Care Documents

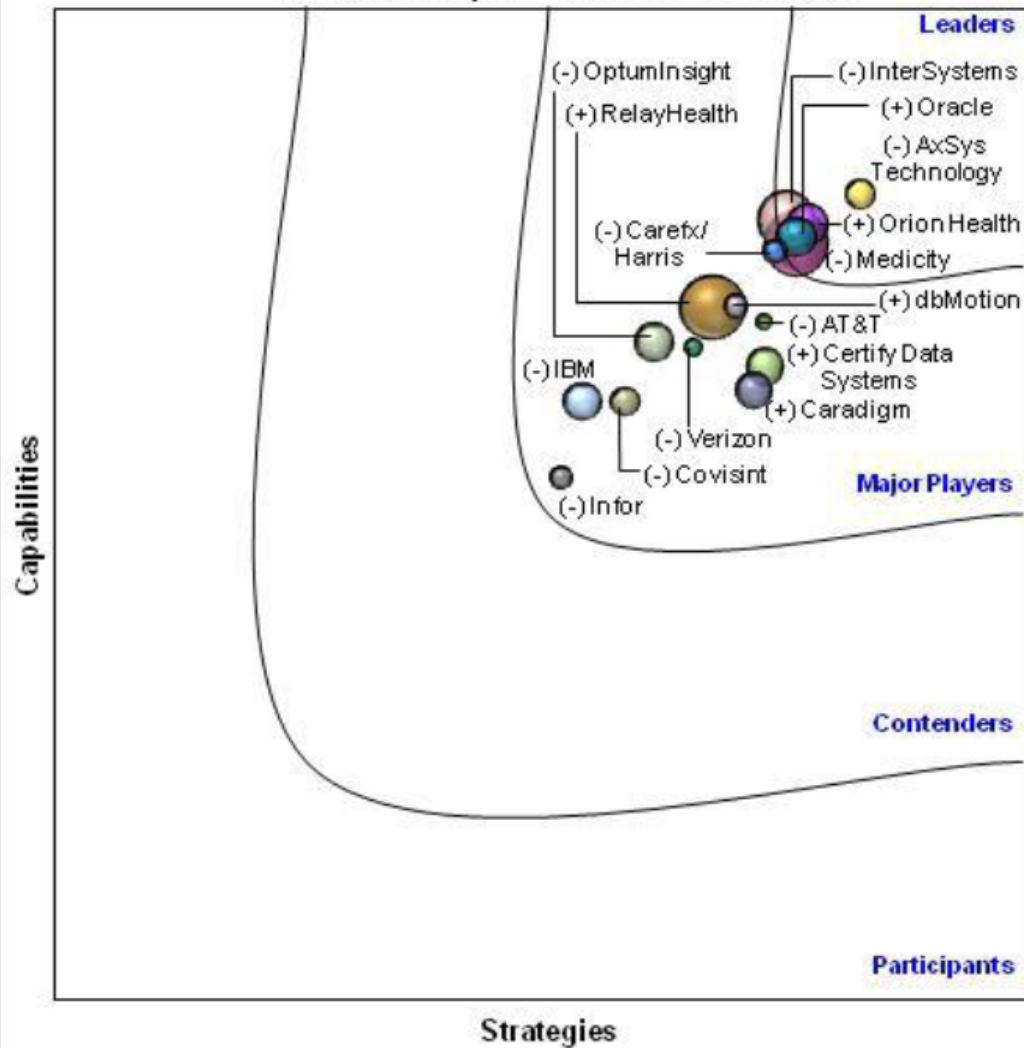

What Does Health Information Exchange Deliver?

- Collaboration: **Share** healthcare information between caregivers, across networks
 - Using **standards** such as IHE (Integrating the Healthcare Enterprise)
 - To provide **patient-centric** electronic health records
 - **Reduce** healthcare costs – avoid duplication of tests and treatment and prevent avoidable deaths
- **Grow** into the robust infrastructure required for healthcare analytics and research analytics
 - Could span many levels:
 - Public National
 - State/Province
 - Community
 - Local Provider Service Area

IDC 2012 MarketScape Vendor Assessment

U.S. Health Information Exchange Platform Solutions

IDC MarketScape: HIE Platform Solutions

- Oracle HIE is positioned in the **Leaders Category**
- Key differentiator is that Oracle can provide a **comprehensive HIE technology stack** from hardware and storage infrastructure to databases and middleware to applications
- Customers appreciate that Oracle provides a **transparent development environment** (i.e., not a "black box") and the tools to allow them self-develop additional functionality
- HIOs seeking a strong data model, analytics, and predictive analytics capabilities **should consider Oracle Health Information Exchange solution**

Source: IDC Health Insights, 2012: U.S. Health Information Exchange Platform Solutions 2012 Vendor Assessment. IDC MarketScape vendor analysis model is designed to provide an overview of the competitive fitness of ICT suppliers in a given market. The research methodology utilizes a rigorous scoring methodology based on both qualitative and quantitative criteria that results in a single graphical illustration of each vendor's position within a given market. The Capabilities score measures vendor product, go-to-market and business execution in the short-term. The Strategy score measures alignment of vendor strategies with customer requirements in a 3-5-year timeframe. Vendor market share is represented by the size of the circles.

HIE Market - Global Trends and Forecast 2018

GEOGRAPHIC REACH VS PRODUCT PORTFOLIO,
BY KEY PLAYER (2013)

Source: Markets and Markets, 2014: HEALTHCARE INFORMATION EXCHANGE (HIE)
MARKET - Global Trends & Forecast to 2018

- Oracle is one of the very few vendors that offers **comprehensive solution** that ranges from hardware and storage, to database and middleware, and applications for best of class HIE implementations
- Oracle HSGBU added Master Person Index to its healthcare product offerings which is now a **leader in Master Person Index (EMPI) domain**
- Oracle HIE implementations can scale from small departmental to large to very large **country-wide implementations**
- Oracle HIE **offers an extensive range of functionality** and supports multiple standards. The company believes in providing customer friendly environment **and allows the flexibility for additional functionality.**

Oracle Health Information Exchange

Key Components

- **Oracle Health Sciences Information Manager (HIM) and Gateway (HIG)**

HIM is a performance optimized solution for standards-based health record locator services and governance. HIG enables secure cross-community access to healthcare data.

- **Oracle Healthcare Master Person Index (OHMPI)**

OHMPI provides cross-reference services and a unified view of patients, providers or other healthcare entity within a healthcare organization or across HIE networks.

- **Oracle Healthcare Data Repository (HDR)**

HDR provides clinical data and document repository functions including the ability to produce, store, and consume standards-compliant healthcare documents.

Oracle Global HIE (EHR) Initiatives

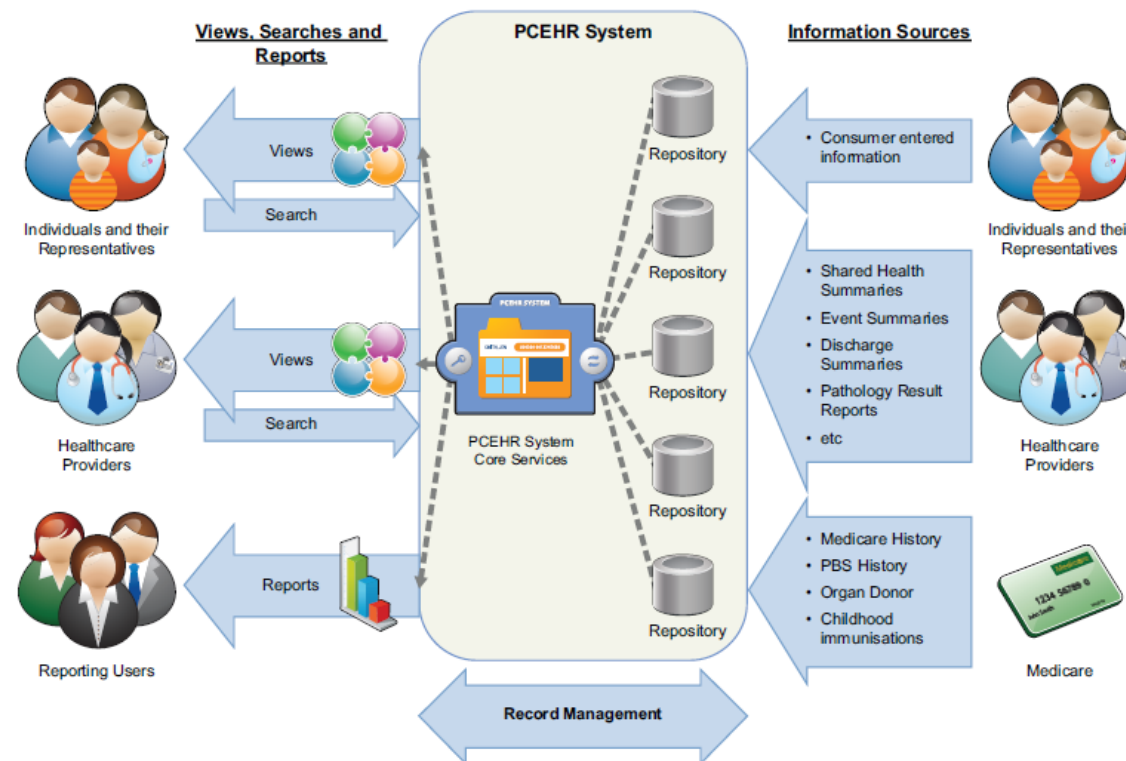

Singapore One Singaporean one Medical Record

- 5.2 Million Citizens, 4 official languages
- 9% of resident population aged 65% above project 20% by 2030
- Vision for patients to move **seamlessly** across the healthcare system receiving **patient centric** care at the most **appropriate setting**
- Phase 1 implemented in 2011 to provide **longitudinal care summary shared** across **all providers** of care
- Delivered in 11 months

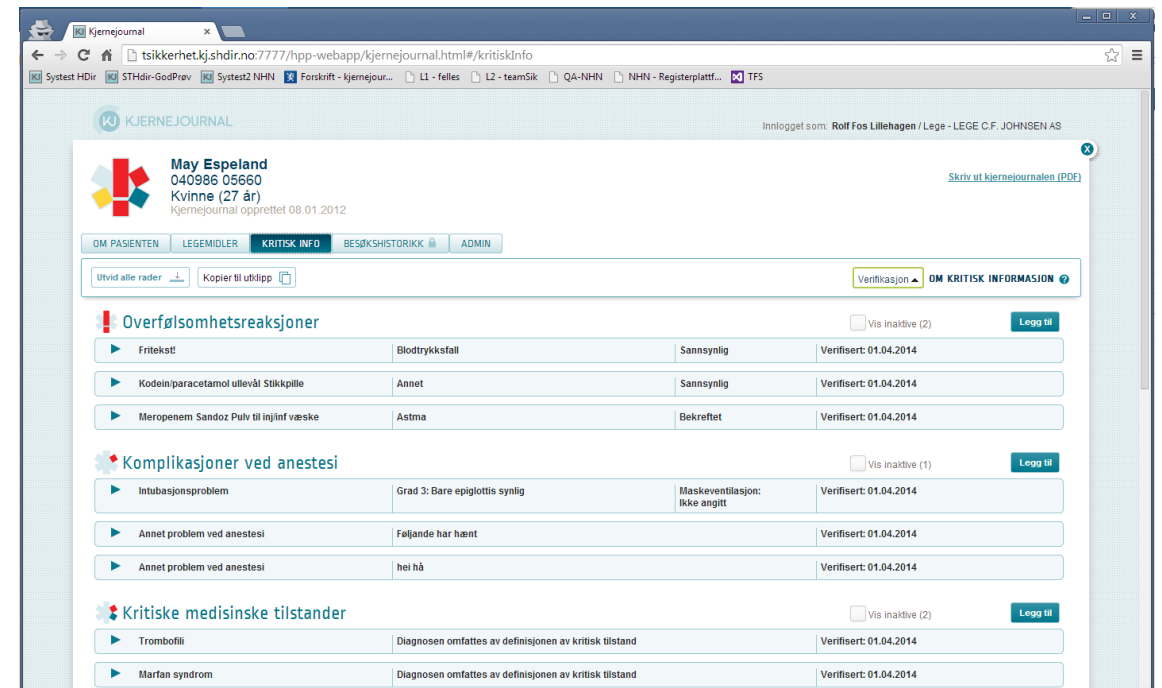

Australia Personally Controlled Medical Record

- 23 million citizens
- Up to **1 in 6** (or 18%) **medical errors** are due to inadequate patient information
- Nearly **1 in 3** (30%) unplanned hospital admissions in those over **75 years** are associated with **medication mistakes**
- Solutions is a **Payer, Provider and Citizen** Healthcare record, over 1 million citizens now have their own Personal Record
- **Opt-in system** with a focus on **security** and **consent** management

Norway National Electronic Health Record

- 5 million citizens
- Clinical Portal that allow the patient to **hide** or **remove** any part of the **encounter** e.g. delete the specified prescribe drug from my encounter
- Security framework that allows the **citizen** to **control** the **security** of their **own clinical data**
- Phase 1 implemented 2013

Brazil National Healthcare Card

- 201 Million Citizens
- To promote **correct identification** and **individualization** of **health information**
- To provide demographic information to support **decision making** of **healthcare policies**
- To provide electronic **access** of **health information** to **citizens**
- To promote **interoperability** between **health IT** systems with the national SUS **patient database** (CADSUS).
